Re: NOV dated December 17, 2007.

Dear Ms. White:

In response to the NOV issued by the Utah Division of Oil, Gas and Mining (DOGM), on the Beck Street Quarry, please see the following:

1. Signs indicating "Topsoil Location Area" have been received as of this date and will be placed in the appropriate areas today, or tomorrow. Pictures will be taken to show the locations where they have been placed, and provided to you as soon as possible.
2. "Fines" laboratory testing will be done by the Utah State Soils Lab. The samples will be delivered to the testing lab either today or tomorrow. It is unsure how long the lab testing will take, but a 24-48 hour turnaround will be requested.
3. The requirement to show how the 58° highwall is being maintained in an "environmentally stable and safe manner" will be turned over to environmental consultants, JBR. JBR is the group who prepared our initial reclamation plan for Beck Street. I will have a representative from JBR contact you/Beth Erickson to find out the specific requirements you need to see in the update.

I apologize for not having the issues brought forward by DOGM regarding the Beck Street Quarry finalized sooner. Signs for the topsoil area were ordered with the initial letter sent out from DOGM. I also realized I need to involve our consultants in preparing the amendment for the highwall information you are requiring.

I understand a time frame of 7 days has been given to accomplish these tasks, and DOGM has given acceptable time frames in the past to address the above issues. I anticipate having the signs in the ground very soon, with pictures to show this. The soil samples will be requested to be done as soon as possible. The highwall issue will take several days to accomplish, and your patience in this matter is requested. I have spoken with Linda Matthews with JBR, and she is confident a draft for the highwall supplement will be turned in by January 10, 2008.

Please contact me with further questions
